

AIR MASSAGE SYSTEM

Relaxing or powerfull... For all ages and physical conditions.
While satisfying all needs, it meets sanitary requirements
perfectly and is maintenance free.

AIR MASSAGE SYSTEM

HOW DOES IT WORK?

The air system is a massage through projection of warmed air on all parts of the body. The blower projects air through the manifold and the jets, which are strategically installed in the bathtub. The air is preheated at body temperature using a ceramic heating element integrated in the blower*. Thus, the body is wrapped in a relaxing or more vigorous massage depending on the intensity setting.

Air massage relaxes muscles and at the same time, stimulates production of a natural analgesic called endorphins. Using an air massage system creates well-being and relaxation of the whole body.

** Components available in certain blower models.*

FOR WHOM?

For everyone! Thanks to the variable power of the massage, the air system will please everyone who wishes for a relaxing massage, a smooth tension liberating massage or a more invigorating massage to loosen tight muscles.

HYGIENIC

The air system is completely hygienic if no water circulates in the air hoses. Only air, pre-heated to body temperature circulates in the system so there is no retention of stagnant water therefore no bacterial proliferation or algae in the air hoses.

MAINTENANCE FREE

No maintenance is required for this system. No specific monthly cleaning. After each use a purge system will automatically start to drain and dry each air jet in order to guarantee hygiene and perfect function for the next use.

RELIABLE

The air system is the most reliable bathtub massage system on the market. Since there are no mechanical parts that function in water, the longevity, durability and resistance of this system has been proven over the last 15 years.

AIR MASSAGE SYSTEM WITH BOTTOM AIR JETS

This system remains the most popular and adapts to all tubs and meets all expectations. The jets are installed in the bottom of the tub and air is directly propelled on the body. This configuration allows a great variety of massages, including our air sequencer.

AIR MASSAGE SYSTEM WITH LATERAL AIR JETS

The sanitary conditions of these jets are ensured by gravitational drainage and the programmed drying cycle adds to the complete hygienic properties. Each jet is designed with a center opening which releases powerful air pressure offering a complete massage to every part of the body.

AIR MASSAGE SYSTEM WITH "ILLUSION" AIR JETS

You want to preserve the fine appearance of your tub and you want a system that is as discrete as possible. CG Air Systèmes Inc. has it! Invisible jets equipped with our anti-return check valves are positioned beneath the bathtub. Once the installation is complete, only miniscule 1/8" air outlets are visible offering maximum massage efficiency and discrete design.
